

Sorting Algorithms — Mean Time with Input Sensitivity

Line = mean across cases | Shaded area = spread between min and max case

$O(n)$ Algorithms — Mean Time & Input Sensitivity

Line = mean(random, sorted, reversed) | Shaded = min/max spread

$O(n \log n)$ Algorithms — Mean Time & Input Sensitivity

Line = mean(random, sorted, reversed) | Shaded = min/max spread

$O(n \log^2 n)$ Algorithms — Mean Time & Input Sensitivity

Line = mean(random, sorted, reversed) | Shaded = min/max spread

$O(n^2)$ Algorithms — Mean Time & Input Sensitivity

Line = mean(random, sorted, reversed) | Shaded = min/max spread

Input Sensitivity per Algorithm

(max_time - min_time) / mean_time at largest measured n
